

KHALID NASIRU

Web3 Engineer & Frontend Developer

Portfolio: whiteghost-dev.vercel.app
GitHub: github.com/whiteghost0001
Email: bigkaytwo@gmail.com
Location: Abuja, Nigeria
Origin: Kaduna State, Nigeria

PROFESSIONAL SUMMARY

Web3 Engineer and Frontend Developer focused on building production-quality decentralized applications, financial products, and modern web interfaces. Experienced across React, Next.js, TypeScript, Solidity, Foundry, wallet integrations, blockchain APIs, and Web3 product development. I work across the boundary between frontend engineering and on-chain systems, with a strong focus on clean architecture, responsive user experiences, maintainable code, and reliable blockchain interactions.

TECHNICAL SKILLS

Frontend Engineering:	React, Next.js, TypeScript, JavaScript, Tailwind CSS, shadcn/ui, Framer Motion, Responsive UI, Component Architecture
Web3 / Blockchain:	Solidity, Foundry, Wagmi, Viem, RainbowKit, Stellar, Soroban, Stellar SDK, Smart Contract Integration, Wallet UX
Backend & Infra:	Node.js, REST APIs, PostgreSQL, Docker, Git, GitHub, Vercel
Engineering Practices:	Component Architecture, API Integration, On-Chain Transaction UX, Smart Contract Testing, Performance & Accessibility

PROFESSIONAL EXPERIENCE

Freelance Web3 & Frontend Engineer 2024 — Present

Independent / Contract

- Engineered non-custodial DeFi yield vaults, milestone payment escrow logic, and Stellar stablecoin settlement interfaces.
- Authored gas-optimized Solidity smart contracts verified with Foundry unit test suites and permissionless reward flows.
- Integrated Wagmi, Viem, RainbowKit, and Stellar SDK into responsive Next.js and React frontends with full type safety.
- Designed production-quality Web3 transaction user flows with real-time on-chain state updates and error handling.

Frontend Developer 2023 — 2024

Contract / Project Work

- Developed responsive web applications including logistics platforms and healthcare service portals using React & Next.js.
- Collaborated with design and product stakeholders to ship pixel-accurate component systems using Tailwind CSS.
- Integrated REST APIs, optimized frontend rendering performance, and ensured cross-browser layout accessibility.

FEATURED PROJECTS

LuminaRail — Stellar / FinTech / Web3 Infrastructure <https://luminarail.vercel.app/>

Stablecoin settlement infrastructure connecting local fiat rails with USDC on Stellar.

- Built Soroban smart contract logic, Stellar asset trustlines, wallet connectivity, and high-speed settlement flows.

NdiFi — DeFi / Ethereum <https://github.com/whiteghost0001>

Non-custodial yield vault automating reward distribution entirely on-chain without admin keys or off-chain cron.

- Implemented Solidity vault accounting, Foundry test coverage, staking contracts, and Wagmi client hooks.

PayGo — [Web3 Billing / Payments](#)

<https://github.com/whiteghost0001>

Billing protocol replacing trust-based agreements with smart contract escrow, milestones, and subscriptions on Base L2.

- Built Solidity payment logic, RainbowKit wallet connection, merchant subscription controls, and Next.js dashboard.

PayProof — [Stellar / Payments](#)

<https://github.com/whiteghost0001>

Payment verification infrastructure generating cryptographically verifiable payment receipts for Web3 transactions.

- Inspected Stellar ledger data, generated immutable payment proofs, and integrated commerce billing APIs.

Basevia — [Payments on Base](#)

<https://github.com/whiteghost0001>

Remittance application routing cross-border payments through Base L2 for low transaction fees and fast finality.

- Deploys routing and settlement contracts paired with a streamlined Next.js remittance user interface.

StellarPay — [Stellar / Soroban](#)

<https://github.com/whiteghost0001>

Programmable payment infrastructure enabling multi-sig treasury management and conditional transfers.

- Soroban Rust contract logic combined with React frontend and Stellar SDK transaction signing.

LIVE PRODUCTS

TROIT Logistics — [Frontend Engineer](#)

<https://troit-logistics.vercel.app/#services>

- Production web interface for logistics services, fleet capabilities, shipment tracking UI, and enterprise contact flows.

Kimana — [Frontend Engineer](#)

<https://kimana-frontend.vercel.app/>

- Client-facing web application focused on aesthetic polish, fluid transitions, and component reusability.

Nexus Health — [Frontend Engineer](#)

<https://my nexushealth.online/>

- Healthcare product platform designed for patient interaction, medical service information, and appointment workflows.

OPEN SOURCE CONTRIBUTIONS

Contributed to core Web3 and frontend libraries including **wagmi**, **shadcn/ui**, **Drips Protocol**, **RainbowKit**, **Foundry**, **Stellar JS SDK**, **OpenZeppelin**, and **viem**. Contributions focus on TypeScript type precision, documentation clarity, accessibility improvements, and edge-case fixes.

ENGINEERING STRENGTHS

- Production-Focused Frontend Engineering & Component Architecture
- Smart Contract Integration & Web3 Application Flow Architecture
- Responsive, Accessible (WCAG), and High-Performance UI Development
- Blockchain Transaction UX, Wallet Connectivity, & On-Chain State Management
- Open-Source Collaboration, Clean Maintainable Code, & Git Workflows

EDUCATION & LOCATION

Kaduna State University B.Sc. Business Administration	Arewa Model School Secondary Education	Location: Abuja, Nigeria State of Origin: Kaduna State, Nigeria
